

ABSTRACT OF THE DISCLOSURE

5 A dry finish composition for producing a monolithic, hard, aesthetic floor
or other surface, includes about 30 percent by weight hydraulic cement such as
Portland cement, about 20 percent by weight fine aggregate such as silica, and
about 50 percent by weight honable aggregate chips. The honable aggregate chips
are relatively large particles such as marble, glass or the like, ranging in size from
No 0 to No 2. A method of using the dry finish composition to make the floor or
10 other surface, and a resultant floor or other surface are also disclosed.
